Can someone please give me a link to where one can find the definitions for the fields \mathbb{Z} , \mathbb{Q} , \mathbb{R} and \mathbb{C} ? I know they have been defined already, but I would like to know the exact definitions, how the axioms are stated and what the motivation behind them is. Thank you very much for your time. A: You can find the definition of the complex numbers in any of many books on the subject. The rationals can be found in any algebraic number theory book; in fact, it was in a class in which I took about ten years ago, and I wrote the definition for you, word for word, just a few days ago. (Actually, I can't remember if it was in Klein's Lectures in Function Theory, which I own and have never opened.) The definitions of the reals and the integers are given in the book I mentioned earlier. A: They are all given in any algebraic number theory book. CD4+CD25+ T cells from the peripheral blood are increased in cirrhotic patients: a comparison with intrahepatic lymphocytes. Several studies have reported the increase of CD4(+)CD25(+) regulatory T cells in the circulation of patients with chronic liver diseases. The aim of this study was to investigate the distribution of CD4(+)CD25(+) regulatory T cells in the circulation and intrahepatic lymphocytes of patients with cirrhosis. The frequency
