#### What's New In Synchronos?

As a dubbing professional or an amateur, you can use Synchronos to synchronize text with video material. A video containing two languages. One of them is a synchronized language (in French). Your project is to synchronize the second video with the first video. The result will be two videos: a video with French text that will be synchronized to the second video a video with English text that will be synchronized to the second video 3. 2. Create the first video. The first step of the dubbing is to create your first video with Synchronos. 3. Export the first video with Synchronos. This is one of the essential steps of the dubbing. The file generated by Synchronos contains the entire duration of the video, the language, the synchronization time and the synchronization rate. It's your job to select the duration of your project and the language that you want to use. 4. Import the first video with Synchronos. The import allows you to add or update the synchronization time and the synchronization rate that will be synchronized with the second video. 5. Add the second language to the first video. The first step in the dubbing is the introduction of the second language. You can add the second language to the first video by using one of the following methods: add the second language to the beginning of the first video add the second language at the middle of the first video add the second language at the end of the first video Synchronos automatically creates the first video with Synchronos, the synchronization time and the synchronization rate. 6. Synchronize the second video with the first video. Once you have created the first video, you can synchronize the second video with the first video. For the synchronization of the text, you will use one of the following methods: add the second language at the beginning of the second video add the second language at the middle of the second video add the second language at the end of the second video Synchronos will automatically create the second video with Synchronos, the synchronization time and the synchronization rate. This option is useful for subtitle and closed captioning. For open captioning, you

must set the video file with closed captioning from Synchronos to the open captioning file that you will convert. To do this, you will first create the open captioning file with Synchronos. 2. Add the first video to the open captioning file. 1. Export the open captioning file with Synchronos. This is one of the essential steps of the dubbing. The file generated by Synchron
