I've been testing Lightroom 5 and Photoshop Elements 5.7.1. The upgrade process was straightforward, though it did hang twice when updating. The good news is that it did over time and I didn't have to re-install. Lightroom still carries a premium price, but that's because it is packed with features. For a very low price, with a similar set of capabilities, you can have a solid image-editing program for a very low price. My biggest complaint is the lack of support for workflow for both Lightroom and Photoshop. Support for both products seems to be going down the drain: Adobe's offering more and more "Annual" versions with no new release number. Their response to Lightroom and Photoshop feature requests is slow and their policy on driving consumer adoption of new technologies slowly, if at all. Hopefully, Adobe won't get so far behind those in the desktop publishing environment that their "Lightroom" program fails. However, Lightroom 5 has a remarkably well-designed interface that makes getting files in and out of the program easy. While PSE is quite similar to Lightroom in interface, it doesn't provide many of the viewer and catalog capabilities. There isn't digital zoom, which stifles the software's usability, and there are no software options, which aren't available in Lightroom. There are tools to quickly create or rearrange the order of images, but there is no comprehensive foreign-keyboard view. I personally think that the procedure to add an image by searching it through, then selecting it from the Viewer, is slow and not as intuitive as the capability I found in Lightroom. (I'll save the catalog tools for "Adobe Photoshop Review.")
