Pirate streaming Piracy is the practice of obtaining content without paying for it, and storing, copying or uploading such content. Copyright infringement is a form of piracy that most commonly involves downloading or streaming content. Piracy affects all creative industries, including the music, book, film, and video games industries. New evidence demonstrates that piracy is in decline, as consumers increasingly value convenience and ease of access. There is a wide variety of illegal content available online, from music, to video games and literature. Some

international businesses have estimated that piracy has cost them US\$70 billion. In the music industry, some piracy has been blamed for the slow demise of the compact disc (CD). The digital music industry has benefited from innovative ways of distributing content, allowing people to copy material for free without the need for a storage device. Streaming services such as Spotify, Netflix, and Pandora have become popular, providing an alternative to illegal downloads. The Information Technology and Innovation Foundation (ITIF) estimated that US\$1.5 billion per year is lost to piracy, with a smaller number estimating that piracy can account for a 10 percent loss of a movie's profits. The MPAA has estimated that piracy cost the US film industry between US\$7 billion and US\$9 billion in 2007. The World Intellectual Property Organization states that piracy is estimated to cause an annual loss of US\$40 billion. Microsoft's Xbox Live service has been estimated to lose US\$2.4 billion per year due to pirates. In the video game industry, revenue lost to piracy is estimated to be as high as US\$32 billion per year. See also Free content Digital rights management Digital rights management
